

ThinkAstra Consulting LLC

Capability Statement

Shadow AI Security & Enterprise AI Governance

Authorized Partner

IBM Partner

Palo Alto Networks NextWave

Netskope Authorized

SAM.gov Registered | UEI on File

CORE CAPABILITIES

- ▶ **Shadow AI Discovery, Governance & Mitigation** — Comprehensive visibility into unauthorized AI usage across the enterprise — risk assessment, policy enforcement, and secure adoption strategies using IBM watsonx.governance and Palo Alto Networks AI Access Security and Enterprise DLP for detection, monitoring, and control.
- ▶ **Secure Enterprise AI Implementation** — End-to-end deployment of governed AI solutions with IBM watsonx (Orchestrate, Generative AI, Verify, MaaS360) integrated with Palo Alto Networks AI Access Security, Zero Trust, and data loss prevention guardrails to eliminate Shadow AI exposure at the source.
- ▶ **Cybersecurity & Zero Trust Modernization** — Identity and device security, NG-CASB, Enterprise DLP, ZTNA, and AI-specific security controls that protect against Shadow AI-driven data leaks, policy violations, and compliance failures across regulated environments.
- ▶ **Data Modernization, Integration & AI Readiness** — Strategies for clean, trusted, and connected data with governance frameworks that support secure AI adoption while proactively surfacing and remediating Shadow AI risks before they become audit or breach events.
- ▶ **Federal & Enterprise Consulting** — AI risk assessments, capability statements, RFI/white paper responses, SAM.gov strategy, and partner enablement for IBM Partner Plus, PAN NextWave, and Netskope programs — with a focus on Shadow AI governance for regulated and federal buyers.

KEY DIFFERENTIATORS

IBM + Palo Alto Networks Partnership Depth	Specialized in integrated solutions — watsonx.governance + AI Access Security + Enterprise DLP (NG-CASB Bundle) — for Shadow AI detection, policy enforcement, and automated governance. Few boutique firms can deliver this dual-partner stack.
Shadow AI Risk Reduction Leadership	Hands-on frameworks and assessments that identify unauthorized AI deployments, enforce access and data policies, and transition Shadow AI into governed, secure enterprise assets — without sacrificing employee productivity.
Regulated Industry Focus	20+ years delivering in HIPAA, federal, financial services, and legal environments. Multilingual capabilities support global and diverse client engagements in law firms, higher education, and government sectors.
Clean, Trusted AI Foundations	Secure data modernization, governance architecture, and AI readiness assessments that address Shadow AI, privacy, and compliance from day one — not as an afterthought.

**Solopreneur Agility,
Enterprise Impact**

Founder-led execution with direct CISO-level engagement, strategic consulting, custom governance deliverables, and partner-driven innovation — low overhead, high time-to-value for mid-market and federal buyers.
